

Hand held grenade launcher SAG - 30

June 2008: The SAG-30 grenade launcher has been sold to the US DOD.

This weapon is very similar to the grenade launcher RAG-30, but with a breech mechanism firing from the closed bolt.

Weapon is designed as semi-automatic (auto loading) only, without capability of the burst firing. It should be deployed within the smallest tactical units on the battlefield as its supportive artillery. This weapon is designed to be carried combat ready for an extended periods of time.

Based on parameters that are similar to the RAG - 30, this weapon's role is elimination of unprotected enemy infantry and light armored vehicles at medium to larger distance. Lethal effect of the VOG17 ammunition is 7,5 m, the weapon is easy to maneuver with in different terrains and it is easy to service.

This makes it an efficient means of holding the enemy at bay at the longer distance.
