

# Smallbore rifle CZ 512

The weapon is based on the most modern trends of design of this category, having a possibility to re-caliber the weapon by a simple change of a barrel. This weapon can shoot cartridges 22 LR and 22 WMR.

We have prepared a full technical documentation and produced prototypes of the weapon. The documentation and produced prototypes were after completion of the development sold to an established weapon producing company.

In its basic form the weapon has a wooden stock of American shape, hand guard and fore end is wooden too. Sights are fixed, set to 50 meters. The receiver is made from aluminum alloy; the trigger mechanism frame is plastic.

Due to a well elaborated design the field stripping is simple and requires no tools, enabling easy and simple cleaning or changing the caliber of the weapon.
